

Technical Specifications

TS1.5 - Specific feed safety limits

Version EN: 1 January 2024

Index

1. INTRODUCTION / SCOPE OF THIS DOCUMENT	3
2. SPECIFIC FEED SAFETY LIMITS	4
MICROBIOLOGICAL HAZARDS	5
CHEMICAL HAZARDS	11
PHYSICAL HAZARDS	69

1. Introduction / Scope of this document

In the different GMP+ documents there are many references made to specific feed safety limits. In this document you will find an overview. These standards were created in consultation with the relevant parties in the animal production chain.

DISCLAIMER: GMP+ International has compiled this list in order to inform interested parties with respect to the standards. The list will be regularly updated. GMP+ International is not liable for any errors in this list.

2. Specific feed safety limits

There are two clear limits in GMP+ product standards if undesirable substances are found in any type of feed: the **action limit**, and the **rejection limit**. These limits refer to what it means for the GMP+ certified company if specified levels of undesirable substances are found in feed. The action limit for undesirable substances is lower than the rejection limit.

As is stated in the various GMP+ documents, the certified company must ensure that deviations (in the product or process) from the requirements in this document are recorded and controlled in order to prevent unintentional use or delivery of the product

The product standards for the maximum level of undesirable substances is calculated proportionately from the product standard for the individual component for mixes of feed materials (semi-manufactured product) which are marketed as such.

Action limit

If undesirable substances are found in any type of feed at levels above the **action limit** — and below the **rejection limit** — this means you must take action.

If the **action limit** is exceeded — then the GMP+ certified company must investigate the source of the contamination, and take measures to remove or limit the source of the contamination (see R1.0 *Feed Safety Management Systems Requirements*, § 8.7).

This limit has been agreed upon in consultation with the sector, the supplier, or the customer.

Rejection limit

If undesirable substances are found in feed at levels above the **rejection limit** then the product is not suitable for use as a feed material or feed (see R1.0 *Feed Safety Management Systems Requirements*, § 8.7).

This limit has been agreed upon in consultation with the sector, the supplier, or the customer.

Microbiological hazards

Code	Contaminant	Product	Action limit ¹	Rejection limit ¹	Supplementary requirements
Microbiological: Other undesirable substances and products					
M1	Antibacterial inhibition	Feed materials	-	< 15 mm	According to the 5-plate test MB003, derived from EG-4-plate test, product basis (RIVM report no. 206; Archiv fur Lebensmittel-hygiene 31 (1981) page 97-140.
		Wet mixes			

1. Action limit: A feasible limit agreed in consultation with the sector, supplier or customer. If this limit is exceeded then an investigation into the cause should be undertaken and corrective measures should be taken to remove or control that cause. Maximum levels in mg/kg (ppm) of the feed materials or compound feeds, derived to a moisture content of 12% unless mentioned differently.

Rejection limit: A feasible limit agreed in consultation with the sector, supplier or customer. If this limit is exceeded then the product is not suitable for use as feed material or animal feed. Maximum levels in mg/kg (ppm) of the feed materials or compound feeds, derived to a moisture content of 12% unless mentioned differently.

Code	Contaminant	Product	Action limit ¹	Rejection limit ¹	Supplementary requirements
Microbiological					
M3	Enterobacteriaceae	Animal by-products that are placed on the market as feed materials.		300 CFU/g	<p>$n = 5, c = 2, m = 10, M = 300$ in 1 g^{-2}</p> <p>These standards apply to: samples of the final products taken during or on withdrawal from storage at the processing plant. This microbiological standard shall not apply to rendered fats and fish oil from the processing of animal by-products, when the processed animal protein, which is obtained during the same processing, is subject to sampling to ensure compliance with those standards.</p> <p>Further, for imports from outside the European Union (EU) specific requirements may apply. See Regulation (EU) 142/2011 for more information.</p>
		Processed petfood <ul style="list-style-type: none"> • Dogchews and processed petfood, with the exception of canned petfood • Canned petfood ³ 		300 CFU/g	<p>$n = 5, c = 2, m = 10, M = 300$ in 1 g^{-2}</p> <p>Samples are taken during production and/or during storage (before dispatch).</p> <p>Further, for imports from outside the European Union (EU) specific requirements may apply. See Regulation (EU) 142/2011 for more information.</p>
		Raw petfood	5.000 CFU/g		<p>The process of production of raw petfood shall meet the following 'process hygiene criterion' **: $n = 5, c = 2, m = 500$ in $1\text{ g}, M = 5.000$ in 1 g^{-2}</p>

				<p>Samples are taken during production and/or during storage (before dispatch).</p> <p>Process hygiene criterion' means a criterion indicating the acceptable functioning of the production process. Such a criterion is not applicable to products placed on the market. It sets an indicative contamination value above which corrective actions are required in order to maintain the hygiene of the process in compliance with general requirements for the safety of feed.</p> <p>See Regulation 142/2011, annex XIII, chapter 2, point 6 for more details (e.g. control measures, notification to the competent authority, etc.) on this "process hygiene criterion".</p> <p>Further, for imports from outside the European Union (EU) specific requirements may apply. See Regulation (EU) 142/2011 for more information.</p>
--	--	--	--	--

1. Action limit: A feasible limit agreed in consultation with the sector, supplier or customer. If this limit is exceeded then an investigation into the cause should be undertaken and corrective measures should be taken to remove or control that cause. Maximum levels in mg/kg (ppm) of the feed materials or compound feeds, derived to a moisture content of 12% unless mentioned differently.

Rejection limit: A feasible limit agreed in consultation with the sector, supplier or customer. If this limit is exceeded then the product is not suitable for use as feed material or animal feed. Maximum levels in mg/kg (ppm) of the feed materials or compound feeds, derived to a moisture content of 12% unless mentioned differently.

2. n = number of samples to be tested; m = threshold value for the number of bacteria; the result shall be considered satisfactory if the number of bacteria in all samples does not exceed m ; M = maximum value for the number of bacteria; the result shall be considered unsatisfactory if the number of bacteria in one or more samples is M or more; and c = number of samples the bacterial count of which may be between m and M , the sample shall still be considered acceptable if the bacterial count of the other samples is m or less.

3. Canned petfood which has been subjected to heat treatment with a F_c value of at least 3

Code	Contaminant	Product	Action limit 1	Rejection limit 1	Supplementary requirements
Microbiological: Microbiological contamination					
M4a	Salmonella	Consumption chick feed: end products and feed materials for: <ul style="list-style-type: none"> • Top breeding consumption chicks • Breeding increase consumption chicks • Increase consumption chicks • Consumption chicks 	-	0+% ⁴ (approaching 0%)	
		Laying poultry feed: end products and feed materials for: <ul style="list-style-type: none"> • Top breeding laying poultry • Raising increase laying poultry • Increase laying poultry 	-	0+% ⁴ (approaching 0%)	
		<ul style="list-style-type: none"> • Laying-hens and breeding hens 	1%	0+% ⁴ (approaching 0%) for S. enteritidis and S. typhimurium	
		Turkey feed: end products and feed materials for: <ul style="list-style-type: none"> • Raising increase turkeys • Increase turkeys • Consumption turkeys 	-	0+% ⁴ (approaching 0%)	

		Other animal feeds, feed materials and wet mixes intended for livestock farms (except for poultry feeds).	-	Absent in 25 gr	
		From animal by-products derived products with the exception of canned petfood	-	Absent in 25 gr	$n = 5, c = 0, m = 0, M = 0^2$
		From animal by-products derived canned petfood		-	Canned petfood which has been subjected to heat treatment with a Fc value of at least 3
M4b	Salmonella preservation determined through pH	Feed materials for delivery to livestock farms;		Maximum pH for guarantee:	If preservation can be achieved at a higher pH then this should be supported with data. These norms do not apply if the products are supplied at a temperature of at least 60°C and the supplier is demonstrably informed of the storage conditions. The absence of Salmonella can also be shown in heat-treated wet mixes and feed materials (<13% moisture) through compliance with the norms for Enterobacteriaceae.
		Wet mixes for delivery to livestock farmers on the basis of:			
		• Spontaneous lactic acid fermentation	-	4.5	
		• Add organic acids	-	4	
		• Add inorganic acids	-	3,5	

1. **Action limit:** A feasible limit agreed in consultation with the sector, supplier or customer. If this limit is exceeded then an investigation into the cause should be undertaken and corrective measures should be taken to remove or control that cause. Maximum levels in mg/kg (ppm) of the feed materials or compound feeds, derived to a moisture content of 12% unless mentioned differently.

Rejection limit: A feasible limit agreed in consultation with the sector, supplier or customer. If this limit is exceeded then the product is not suitable for use as feed material or animal feed. Maximum levels in mg/kg (ppm) of the feed materials or compound feeds, derived to a moisture content of 12% unless mentioned differently.

2. n = number of samples to be tested; m = threshold value for the number of bacteria; the result shall be considered satisfactory if the number of bacteria in all samples does not exceed m ; M = maximum value for the number of bacteria; the result shall be considered unsatisfactory if the number of bacteria in one or more samples is M or more; and c = number of samples the bacterial count of which may be between m and M , the sample shall still be considered acceptable if the bacterial count of the other samples is m or less.

4. Explanation of 0^+ : this norm does not apply to each individual sample. In a particular period of time the Salmonella incidence at company level should approach 0% (= 0^+).

Code	Contaminant	Product	Action limit ₁	Rejection limit ₁	Supplementary requirements
Microbiological: Microbiological contamination					
M5a	Moulds	Feed materials	10 ⁶ CFU/g		In the TNO report "Norm for fungal load in animal feed (S9.75)" you can read the foundation of the new standards and the suggestions for analysis methods.
M5b	Yeast	Feed materials ≤ 12% moisture content or aw-value ≤ 0,95	10 ⁶ CFU/g		
		Feed materials ≥ 12% moisture content or aw-value ≥ 0,95	-		

1. Action limit: A feasible limit agreed in consultation with the sector, supplier or customer. If this limit is exceeded then an investigation into the cause should be undertaken and corrective measures should be taken to remove or control that cause. Maximum levels in mg/kg (ppm) of the feed materials or compound feeds, derived to a moisture content of 12% unless mentioned differently.

Rejection limit: A feasible limit agreed in consultation with the sector, supplier or customer. If this limit is exceeded then the product is not suitable for use as feed material or animal feed. Maximum levels in mg/kg (ppm) of the feed materials or compound feeds, derived to a moisture content of 12% unless mentioned differently.

Chemical hazards

Code	Contaminant	Product	Action limit ⁵	Rejection limit ⁵	Supplementary requirements
Chemical: Mycotoxin					
C1	Aflatoxin B1	Feed materials intended for (direct) delivery to dairy farmers	-	0,005 mg/kg	
		Feed materials	-	0,02 mg/kg	
		Complementary and complete feed with the exception of:	-	0,01 mg/kg	
		<ul style="list-style-type: none"> compound feed for dairy cattle and calves, dairy sheep and lambs, dairy goats and kids, piglets and young poultry animals. 	-	0,005 mg/kg	
		<ul style="list-style-type: none"> compound feed for cattle (except dairy cattle and calves), sheep (except dairy sheep and lambs), goats (except dairy goats and kids), pigs (except piglets) and poultry (except young animals). 	-	0,02 mg/kg	

5. **Action limit:** A feasible limit agreed in consultation with the sector, supplier or customer. If this limit is exceeded then an investigation into the cause should be undertaken and corrective measures should be taken to remove or control that cause. Maximum levels in mg/kg (ppm) of the feed materials or compound feeds, derived to a moisture content of 12% unless mentioned differently.

Rejection limit: A feasible limit agreed in consultation with the sector, supplier or customer. If this limit is exceeded then the product is not suitable for use as feed material or animal feed. Maximum levels in mg/kg (ppm) of the feed materials or compound feeds, derived to a moisture content of 12% unless mentioned differently.

Code	Contaminant	Product	Action limit ⁵	Rejection limit ⁵	Supplementary requirements
Chemical: Crop protection agents (Pesticides which are not permitted in the EU) ⁶					
C2	Aldrin Dieldrin (Singly or combined expressed as dieldrin)	Feed materials and compound feed, with the exception of:	-	0,01 mg/kg	Maximum level for aldrin and dieldrin, singly or combined, expressed as dieldrin.
		• fats and oils,	-	0,1 mg/kg	
		• compound feed for fish	-	0,2 mg/kg	

5. Action limit: A feasible limit agreed in consultation with the sector, supplier or customer. If this limit is exceeded then an investigation into the cause should be undertaken and corrective measures should be taken to remove or control that cause. Maximum levels in mg/kg (ppm) of the feed materials or compound feeds, derived to a moisture content of 12% unless mentioned differently.

Rejection limit: A feasible limit agreed in consultation with the sector, supplier or customer. If this limit is exceeded then the product is not suitable for use as feed material or animal feed. Maximum levels in mg/kg (ppm) of the feed materials or compound feeds, derived to a moisture content of 12% unless mentioned differently.

6. Pesticides which are not included in Directive 2002/32/EC, Annex I, Section IV should comply to Regulation (EC) no. 396/2005

Code	Contaminant	Product	Action limit ⁵	Rejection limit ⁵	Supplementary requirements
Chemical: Heavy metals					
C3	Arsenic ⁷	Feed materials, with the exception of:	-	2 mg/kg	
		<ul style="list-style-type: none"> meal made from grass, from dried lucerne and from dried clover, and dried sugar beet pulp and dried molasses sugar beet pulp; 	-	4 mg/kg	
		<ul style="list-style-type: none"> palm kernel expeller; 	-	4 mg/kg ⁸	
		<ul style="list-style-type: none"> peat; leonardite; 	-	5 mg/kg ⁸	
		<ul style="list-style-type: none"> phosphates and calcareous marine algae; 	-	10 mg/kg	
		<ul style="list-style-type: none"> calcium carbonate; calcium and magnesium carbonate ⁹; calcareous marine shells; 	-	15 mg/kg	
		<ul style="list-style-type: none"> magnesium oxide and magnesium carbonate; 	-	20 mg/kg	
		<ul style="list-style-type: none"> fish, other aquatic animals and products derived thereof; 	-	25 mg/kg ⁸	
		<ul style="list-style-type: none"> seaweed meal and feed materials derived from seaweed. 	-	40 mg/kg ⁸	
		Iron particles used as tracer	-	50 mg/kg	
		Feed additives belonging to the functional group of compounds of trace elements except:	-	30 mg/kg	
		<ul style="list-style-type: none"> cupric sulphate pentahydrate; cupric carbonate; dicopper; chloride trihydroxide; ferrous carbonate; dimanganese chloride trihydroxide; 	-	50 mg/kg	

	<ul style="list-style-type: none"> zinc oxide, manganous oxide and cupric oxide. 	-	100 mg/kg
	Complete feed, with the exception of:	-	2 mg/kg
	<ul style="list-style-type: none"> complete feed for fish and fur animals; 	-	10 mg/kg ⁸
	<ul style="list-style-type: none"> complete feed for pet animals containing fish, other aquatic animals and products derived thereof and/or seaweed meal and feed materials derived from seaweed. 	-	10 mg/kg ⁸
	Complementary feed, with the exception of:	-	4 mg/kg
	<ul style="list-style-type: none"> mineral feed; 	-	12 mg/kg
	<ul style="list-style-type: none"> complementary feed for pet animals containing fish, other aquatic animals and products derived thereof and/or seaweed meal and feed materials derived from seaweed; 	-	10 mg/kg ⁸
	<ul style="list-style-type: none"> long-term supply formulations of feed for particular nutritional purposes with a concentration of trace elements higher than 100 times the established maximum content in complete feed. 	-	30 mg/kg

5. **Action limit:** A feasible limit agreed in consultation with the sector, supplier or customer. If this limit is exceeded then an investigation into the cause should be undertaken and corrective measures should be taken to remove or control that cause. Maximum levels in mg/kg (ppm) of the feed materials or compound feeds, derived to a moisture content of 12% unless mentioned differently.

Rejection limit: A feasible limit agreed in consultation with the sector, supplier or customer. If this limit is exceeded then the product is not suitable for use as feed material or animal feed. Maximum levels in mg/kg (ppm) of the feed materials or compound feeds, derived to a moisture content of 12% unless mentioned differently.

7. The maximum levels refer to the total level of arsenic.

8. At the request of the competent authorities the responsible operator must carry out an analysis to show that the level of inorganic arsenic is lower than 2 ppm. This analysis is especially important for the *Hizikia fusiforme* seaweed

9. Calcium and magnesium carbonate refers to the natural mixture of calcium carbonate and magnesium carbonate as described in the European Catalogue of feed materials.

Code	Contaminant	Product	Action limit ⁵	Rejection limit ⁵	Supplementary requirements

C4	Hydrocyanic acid	Feed materials, with the exception of:	-	50 mg/kg	
		• linseed;	-	250 mg/kg	
		• linseed cakes;	-	350 mg/kg	
		• manioc products and almond cake.	-	100 mg/kg	
		Complete feed, with the exception of:	-	50 mg/kg	
		• complete feed for young chickens (< 6 weeks).	-	10 mg/kg	

5. Action limit: A feasible limit agreed in consultation with the sector, supplier or customer. If this limit is exceeded then an investigation into the cause should be undertaken and corrective measures should be taken to remove or control that cause. Maximum levels in mg/kg (ppm) of the feed materials or compound feeds, derived to a moisture content of 12% unless mentioned differently.

Rejection limit: A feasible limit agreed in consultation with the sector, supplier or customer. If this limit is exceeded then the product is not suitable for use as feed material or animal feed. Maximum levels in mg/kg (ppm) of the feed materials or compound feeds, derived to a moisture content of 12% unless mentioned differently.

Code	Contaminant	Product	Action limit ⁵	Rejection limit ⁵	Supplementary requirements
Chemical: Heavy metals					
C6	Cadmium	Feed materials of vegetable origin	-	1 mg/kg	
		Feed materials of animal origin	-	2 mg/kg	
		Feed materials of mineral origin, with the exception of:	-	2 mg/kg	
		• phosphates	-	10 mg/kg	
		Feed additives, belonging to the functional group "Compounds of trace elements", with the exception of:	-	10 mg/kg	
		• cupric oxide, manganous oxide, zinc oxide and manganous sulphate-monohydrate.	-	30 mg/kg	
		Feed additives belonging to the functional groups of binders and anti-caking agents	-	2 mg/kg	
		Premixtures	-	15 mg/kg ¹⁰	
		Complementary feed with the exception of:	-	0,5 mg/kg	
		• Mineral feed	-		
		◦ containing < 7% phosphorus ¹¹	-	5 mg/kg	
		◦ containing ≥ 7% phosphorus ¹¹	-	0,75 mg/kg per 1% phosphorus ¹¹ , with a maximum of 7,5 mg/kg	

	<ul style="list-style-type: none"> Complementary feed for pet animals 		2 mg/kg	
	<ul style="list-style-type: none"> Long-term supply formulations of feed for particular nutritional purposes with a concentration of trace elements higher than 100 times the established maximum content in complete feed; 	-	15 mg/kg	
	Complete feed with the exception of:	-	0,5 mg/kg	
	<ul style="list-style-type: none"> complete feed for cattle (except calves), sheep (except lambs) goats (except kids) and fish; 	-	1 mg/kg	
	<ul style="list-style-type: none"> complete feed for pet animals. 	-	2 mg/kg	

5. **Action limit:** A feasible limit agreed in consultation with the sector, supplier or customer. If this limit is exceeded then an investigation into the cause should be undertaken and corrective measures should be taken to remove or control that cause. Maximum levels in mg/kg (ppm) of the feed materials or compound feeds, derived to a moisture content of 12% unless mentioned differently.

Rejection limit: A feasible limit agreed in consultation with the sector, supplier or customer. If this limit is exceeded then the product is not suitable for use as feed material or animal feed. Maximum levels in mg/kg (ppm) of the feed materials or compound feeds, derived to a moisture content of 12% unless mentioned differently.

10. The maximum level established for premixtures takes into account the additives with the highest level of lead and cadmium and not the sensitivity of the different animal species to lead and cadmium. As provided in Article 16 of Regulation (EC) No 1831/2003 of the European Parliament and of the Council of 22 September 2003 on additives for use in animal nutrition (OJ L 268, 18.10.2003, p. 29), in order to protect animal and public health, it is the responsibility of the producer of premixtures to ensure that, in addition to compliance with the maximum levels for premixtures, the instructions for use on the premixture are in accordance with the maximum levels for complementary and complete feed.

11. The % of phosphorus is relative to a feed with a moisture content of 12 %.

Code	Contaminant	Product	Action limit ⁵	Rejection limit ⁵	Supplementary requirements

5. Action limit: A feasible limit agreed in consultation with the sector, supplier or customer. If this limit is exceeded then an investigation into the cause should be undertaken and corrective measures should be taken to remove or control that cause. Maximum levels in mg/kg (ppm) of the feed materials or compound feeds, derived to a moisture content of 12% unless mentioned differently.

Rejection limit: A feasible limit agreed in consultation with the sector, supplier or customer. If this limit is exceeded then the product is not suitable for use as feed material or animal feed. Maximum levels in mg/kg (ppm) of the feed materials or compound feeds, derived to a moisture content of 12% unless mentioned differently.

13. Upper-bound concentrations; upper-bound concentrations are calculated on the assumption that all values of the different congeners below the limit of quantification are equal to the limit of quantification.

14. Fresh fish and other aquatic animals directly delivered and used without intermediate processing for the production of feed for fur animals are not subject to the maximum levels, while maximum levels of 3,5 ng WHO-PCDD/F-TEQ/kg product and 6,5 ng WHO-PCDD/F-PCB-TEQ/kg product are applicable to fresh fish and 20,0 ng WHO-PCDD/F-PCB-TEQ/kg product is applicable to fish liver used for the direct feeding of pet animals, zoo and circus animals or used as feed material for the production of pet food. The products or processed animal proteins produced from these animals (fur animals, pet animals, zoo and circus animals) cannot enter the food chain and cannot be fed to farmed animals which are kept, fattened or bred for the production of food.

15. The maximum level is also applicable to the feed additives belonging to the functional groups of substances for the control of radionuclide contamination and substances for reduction of the contamination of feed by mycotoxins which are also belonging to the functional groups of binders and anti-caking agents.

16. The maximum level is also applicable to the feed additives belonging to the functional groups of substances for the control of radionuclide contamination and substances for reduction of the contamination of feed by mycotoxins which are also belonging to the functional groups of binders and anti-caking agents.

17. Fresh fish and other aquatic animals directly delivered and used without intermediate processing for the production of feed for fur animals are not subject to the maximum levels, while maximum levels of 75 µg/kg product are applicable to fresh fish and 200 µg/kg product are applicable to fish liver used for the direct feeding of pet animals, zoo and circus animals or used as feed material for the production of pet food. The products or processed animal proteins produced from these animals (fur animals, pet animals, zoo and circus animals) cannot enter the food chain and cannot be fed to farmed animals which are kept, fattened or bred for the production of food.

18. The maximum level is also applicable to the feed additives belonging to the functional groups of substances for the control of radionuclide contamination and substances for reduction of the contamination of feed by mycotoxins which are also belonging to the functional groups of binders and anti-caking agents

5. **Action limit:** A feasible limit agreed in consultation with the sector, supplier or customer. If this limit is exceeded then an investigation into the cause should be undertaken and corrective measures should be taken to remove or control that cause. Maximum levels in mg/kg (ppm) of the feed materials or compound feeds, derived to a moisture content of 12% unless mentioned differently.

Rejection limit: A feasible limit agreed in consultation with the sector, supplier or customer. If this limit is exceeded then the product is not suitable for use as feed material or animal feed. Maximum levels in mg/kg (ppm) of the feed materials or compound feeds, derived to a moisture content of 12% unless mentioned differently.

32. The levels referred to in this Annex are indicative levels above which, certainly in the case of repetitive findings, investigations should be performed on the factors leading to the presence of T-2 and HT-2 toxin or on the effects of feed and food processing. The indicative levels are based on the occurrence data available in the EFSA database as presented in the EFSA opinion. The indicative levels are not feed and food safety levels.

Code	Contaminant	Product	Action limit ⁵	Rejection limit	Supplementary requirements
Chemical: Other undesirable substances and products					
C134	Polyethylene	Fat and oil products (feed materials)	0,25 g/kg (on fat basis)	0,5 g/kg (on fat basis)	See TS 1.4 Forbidden Products and Fuels

5. Action limit: A feasible limit agreed in consultation with the sector, supplier or customer. If this limit is exceeded then an investigation into the cause should be undertaken and corrective measures should be taken to remove or control that cause. Maximum levels in mg/kg (ppm) of the feed materials or compound feeds, derived to a moisture content of 12% unless mentioned differently.

Rejection limit: A feasible limit agreed in consultation with the sector, supplier or customer. If this limit is exceeded then the product is not suitable for use as feed material or animal feed. Maximum levels in mg/kg (ppm) of the feed materials or compound feeds, derived to a moisture content of 12% unless mentioned differently.

Physical hazards

C32a	- Datura sp.	Feed material and compound feed	-	1 000 mg/kg	

33. Action limit: A feasible limit agreed in consultation with the sector, supplier or customer. If this limit is exceeded then an investigation into the cause should be undertaken and corrective measures should be taken to remove or control that cause. Maximum levels in mg/kg (ppm) of the feed materials or compound feeds, derived to a moisture content of 12% unless mentioned differently.

Rejection limit: A feasible limit agreed in consultation with the sector, supplier or customer. If this limit is exceeded then the product is not suitable for use as feed material or animal feed. Maximum levels in mg/kg (ppm) of the feed materials or compound feeds, derived to a moisture content of 12% unless mentioned differently.

Feed Support Products

That was a lot of information to digest and one might ask, what is the next step? Luckily we can offer support for the GMP+ Community when doing this. We provide support by means of various tools and guidances but as each company has a shared responsibility to feed safety, and therefor tailor-made solutions cannot be offered. However, we do help by explaining requirements and provide background information about the requirements.

We have developed various supporting materials for the GMP+ Community. These include various tools, ranging from Frequently Asked Questions (FAQ) lists to webinars and events.

Where to find more about the GMP+ International Feed Support Products

Fact sheets

Review fact sheets: GMP+ Portal <https://portal.gmpplus.org/en-US/tools/fsp/>

Feed Support Products (FSP)

Feed Support Products (FSP) provides valuable and up-to-date information about potentially high-risk feed. The products vary from flow charts of production processes including the risks (Risk Assessments) and studies on undesirable substances (fact sheets).

We enable every company in the
feed chain to take responsibility for
safe and sustainable feed.
