

Early Warning System

This infographic is based on all EWS notifications that are sent to GMP+ International. Members of SecureFeed are allowed to report to SecureFeed instead of GMP+ International. The details from 71 reports sent to SecureFeed are not included in this infographic.

Other*

Sources of contamination

101 Processing - inside feed company

82 Not detected

24 Not applicable**

24 Processing - outside feed company

12 Human failure

7 Natural exposure

Most contaminations are caused by processes inside the feed company. This could occur as a result of concentration factors of hazards while producing feed materials or because of errors in the production process. To get a better grip on feed safety in your company, you need to keep your knowledge on feed safety assurance up to date. We aim to help our GMP+ Community to control feed safety with a number of support products. Our [Feed Support Products](#) give you support in understanding and controlling hazards. To secure your feed safety knowledge, get your free account for the [GMP+ Academy platform](#). There you can find a wide range of teaching materials, such as e-learning modules and courses.

* e.g. Physical contaminants, incorrect composition, vermin, etc.

** e.g. The specific feed safety limit was not exceeded, the contamination was not confirmed by the counter analysis or there was no specific feed safety limit for the contaminant.
